

SYMETRICS®

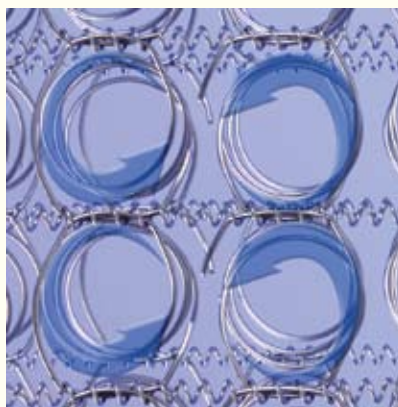

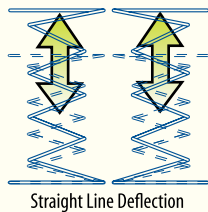

SYMETRICS®...the newest open offset coil technology coupled with ergonomic engineering create an innerspring unique in its ability to stabilize the sleep surface and provide supportive comfort up to the edge.

- Premium high coil count translates to more coils working to support individual body contours-offering customized comfort.
- Identical right-hand coils reversed to reduce partner disturbance and rolling or drifting toward the center of the mattress.
- Heavier 17 1/2 ga. helical wire, and 5/4 helical lacing captures the two coil heads resulting in reduced motion transfer and side sway.

- Facing open offset coils provide counter balanced deflection that equalizes motion when weight is applied. This helps to isolate motion, and reduces partner disturbance.
- Computer controlled manufacturing ensures uniformity and consistency of the unit, allowing improved tailoring and a clean, premium look.

- Counterbalanced for straight line deflection to give greater stability and prevent coil lean.
- Consistent surface coverage for uniform sleeping support from edge to edge.
- High coil count for improved body contouring.
- We supply and control the high quality of our wire product from our own wire mills.

- Coast to coast distribution.
- Representatives servicing your area. International sizes available upon request.

Leggett & Platt is ISO 9000 Compliant and LP 9000 Certified.

The **Active Support Technology™** of innersprings allow your muscles to relax in a more natural sleep position. The coils adjust instantly to your sleep movements, comforting and supporting your body actively as you dream on.
